Addiction... There Is A Way Out

RESOURCE PACKET

ABOUT THE RICHLAND COUNTY OPIATE BOARD AND THIS BOOKLET...

THE RICHLAND COUNTY OPIATE BOARD - is a group of individuals from area agencies and organizations within the county who are committed to the reduction of fatal consequences of opiate abuse through education, response teams, and assistance in finding treatment.

THE OPIATE RESPONSE TEAM (ORT) - is comprised of a Law Enforcement Officer, a Treatment Professional, and an Addiction Advocate. The typical practice of the ORT will be to gather twice a week to gather all overdose data and coordinate a response to those who have overdosed two or more times.

The ORT will arrive in a marked vehicle and will respect the wishes of the occupants of the residence. If they do not wish to participate in the visit the ORT will offer to leave information. If they are permitted to enter the home, the team will discuss the benefits of treatment and attempt to assist them with securing an attainable appointment.

The ORT will meet with family members and/or support system participants on where they can find support and the importance of providing support and strong boundaries.

INDIVIDUALS WHO LIVE OUTSIDE OF RICHLAND COUNTY - if you reside outside of Richland County, you may contact Richland County Mental Health and Recovery Services Board to find assistance in your area. Contact Joe Trolian at: 419-774-5811.

It is our desire that this guide will be helpful, however, this is a growing and changing field. If you have any issues with contact information within this booklet we recommend contacting 2-1-1 for updated information.

Please Note: These listings are not intended as recommendations of specific agencies nor can this be considered a complete list of resources. It is an evolving field and we hope to be able to update this informational guide periodically.

WHAT IS ADDICTION?

A neurological impairment that leads to continuous repetition of a behavior despite adverse consequences.

People with addiction do things that defy explanation. Despite the bad things that happen or could happen when they take drugs, they continue to seek out, procure and imbibe in substances that their brain craves. This craving is so intense, the brain justifies irrational behavior that might include theft, prostitution, starvation, neglect, and reckless actions.

It is a chronic relapse disease, similar to heart disease or emphysema.

Addiction is a disease. It has specific symptoms that are created by using drugs. It is Chronic because there is no cure. With treatment, a person with an addition can be in recovery and manage their disease, but they will never fully be free. Relapsing is possible with addiction. Individuals that are clean for short and long periods of time will find "Triggers" that cause their brain to seek out old stimuli that include drugs.

Psychological dependence occurs when the body has to adjust to the substance by incorporating the substance into its normal functioning. This creates the tolerance and withdrawal effects.

The "High" that is achieved from drugs, results from flooding the brain with dopamine. The brain adjusts to these abnormal levels to replace balance. This new balance, or tolerance, requires the greater quantities of the drug to create a "High". This cycle progresses quickly and the new balance requires a continuous presence of the drugs. Without the presence of the drugs the brain and the body go into withdraw.

How do I treat addiction?

The first step in treatment is realizing you have a disease. This is not a personal failing or a choice, but a medical disease.

GET EDUCATION. Understanding the genetic, behavioral and environmental causes and the physiological and psychological effects of this disease will help you, and your family as you progress through treatment.

GET HELP. There are treatment facilities for the disease. This can include medical treatments that can help mitigate the effects of withdraw and support you in the early stages of recovery. Space at treatment facilities can be tight, and costly. Don't panic, don't give up. There are some that take Medicaid and there are some that offer "Scholarships". If you can't get into treatment, get support. That can help you until you can get treatment.

GET SUPPORT. Don't try to overcome the disease of addiction alone. There are people who understand the disease, understand the road you have traveled and know the road you must take. Their love, understanding and support will carry you through recovery, each and every day. Support can come from hot lines and professionals but the best support is found in groups. Narcotics Anonymous, Alcoholics Anonymous, Not One More, and SMART Recovery are a few examples.

Recovering from the disease of addiction is difficult, but with knowledge, desire, love and support you can overcome the cravings, the drugs, the disease.

HARM REDUCTION

Using illegal drugs such as heroin poses many health risks. Because addiction is a disease, individuals will continue to use despite the negative consequences. Therefore reducing risk for an individual will assist them in their ultimate recovery from this disease. By focusing on the health of an active user we support the recovery.

Blood-borne pathogens, such as bacteria and viruses, are present in blood and body fluids and can cause disease in humans. The blood-borne pathogens of primary concern are hepatitis B, hepatitis C, and HIV.

DIRECT CONTACT. Infected blood or body fluid from one person enters another person's body at the correct entry site, such as infected blood splashing in the eye.

INDIRECT CONTACT. A person's skin touches an object that contains the blood or body fluid of an infected person, such as picking up soiled dressings contaminated with an infected person's blood or body fluid.

RESPIRATORY DROPLET TRANSMISSION. A person inhales droplets from an infected person, such as through a cough or sneeze.

VECTOR-BORNE TRANSMISSION. A person's skin is penetrated by an infectious source, such as a needle.

POTENTIAL RISKS OF INJECTING DRUGS:

Overdose/Sudden Death – Whether from overdose or still mysterious reactions, it is not uncommon for people to die suddenly after injecting.

EMBOLISM – blood clot, usually in the lungs, that can kill you or make you seriously ill.

VIRAL INFECTIONS – HIV, Hepatitis, and other blood-borne infections from using contaminated equipment, including syringes, cookers, cottons, and injection water.

FUNGAL INFECTIONS – using lemon juice to dissolve your shot. These can cause blindness.

BACTERIAL INFECTIONS – Endocarditis, Tetanus, Flesh-eating Bacteria, Wound Botulism and Blood Poisoning (Septicemia) are all serious, and often life-threatening medical conditions.

ABSCESSES – and other injuries are often caused by bacteria or cuts in street heroin. This is a particular risk for skin and muscle-poppers, or when mainliners miss the vein (or a shot leaks out). If you notice redness and swelling around a site and it feels warm or hot, it's best to see a doctor. An untreated abscess can lead to blood poisoning, and injecting through one can bring on endocarditis.

ADDICTION RECOVERY RESOURCES

In alphabetical order:
